	Pack #1	Pack #2	Pack #3	Pack #4	Pack #5	Pack #6	Pack #7	Pack #8	Bottles Only							
Bottle Number																
1. Mask & Hose - Examine for contamination, damage, & deterioration.																
2. Check for tightness of assembly, cracking, and condition of hair net.																
3. Examine harness/cylinder for wear and function of hardware, corrosion, or damage.																
4. Test unit as worn (Unit in ready position)																
A. Check the cylinder gauge for full indication (record pressure)																
B. Check that the breathing purge valve is closed (Full clockwise with pointer on knob up). Examine gasket on facepiece regulator for wear, cuts, or cracking.																
C. Depress the donning switch and attach facepiece regulator to the facepiece.																
D. Open the cylinder valve charging filling hose and regulator. Listen for the alarm to sound and then stop.																
E. Breathe normally from the mask to ensure proper operation																
F. Close cylinder valve (Clockwise), inhale on mask and breathe-down the residual air pressure. The alarm will sound as the pressure drops below 500psi.																
G. Make sure cylinder is completely full. Open all harness straps to full position, place in case in ready position.																
Notes:
